5. Mistakes, common problems and how to avoid them

Docker installation and launch issues:

- Problems installing Docker? Detailed installation instructions can be found LINKhereLINK.
- Trouble launching Docker container for OCR4all? Can't start the server? First, restart Docker, if necessary reload the OCR4all image and set up the corresponding container again. Use the Setup Guide for OCR4all available LINKhereLINK for orientation.

Problems when selecting works in the Project Overview:

- Problems in the "Project Overview" - works are not displayed? Please check your folder structure. Use the specifications in chap. 1.2. If your folder structure is correct, remove the OCR4all Docker container and run the "Docker run..." command again according to the Setup Guide (LINKhereLINK).
- Work selection not possible? Please make sure that your work designations do not contain any spaces or umlauts.

If you have specific questions, comments or problems, please contact us by email (christian.reul@uni-wuerzburg.de (project management); florian.langhanki@uni-wuerzburg.de (advice, guides and instructions, support for non-technical users)) or by posting on GitHub.
