## 3. Start and overview

### 3.1 Start OCR4all

#### Start Docker:

- Linux: Docker starts automatically when the computer is switched on
- Docker for Windows: Start Docker via the Docker icon in "Programs", wait for "Docker is running".
- Docker Toolbox: Open Docker Quickstart Terminal, wait for "Docker is configured to use default machine...".

#### Start OCR4all:

- Linux: Open the terminal, `docker start -ia ocr4all` type in and confirm with "Enter", wait for the server to start
- Windows 10 (Pro, Enterprise, Education): Open Windows PowerShell, `docker start -ia ocr4all` enter the command, confirm with "Enter", wait for the server to start
- Older Windows versions (with Docker Toolbox): Enter Quickstart Terminal in Docker `docker start -ia ocr4all` , confirm with "Enter", wait for the server to start

After that, **OCR4all can be accessed in the browser** under the following domains, depending on the Docker version used:

- Linux, Docker for Windows, MacOS: <http://localhost:1476/ocr4all/>
- Docker Toolbox: <http://192.168.99.100:1476/ocr4all/>
